physical access control products

Proud supplier of:

digicon

About Geran Access Products BV

Geran Access Products BV was founded in 2017 as a sister company of Geran Handel BV. We are a technical wholesaler with full focus on your needs for physical access products and solutions. We are a small-scale business with a personal approach. But we also have a lot of experience and expertise. A winning combination! We are the European importer of Turnstar, a South African manufacturer and Digicon a Brazilian manufacturer of turnstiles, access lanes and barriers. Geran Access Products is a sister company of Geran Handel BV, active in fences and access technology. Top quality, years of experience and a clear approach: that is Geran Access Products BV!

We do more than simply deliver products. Together with our clients, we want to create a comprehensive solution for (mobile) access technique. We deliver custom work, fully adjusted to your specific needs and situation.

Geran Access Products BV is your partner when it comes to efficient, safe and reliable access solutions. From factory to final use. Think work preparation, design, transport, assembly and installation.

Access Lanes

dTower

The dTower access lane provides fast and efficient access to (departments of) buildings and covered outdoor installations. This access system can be used very well at receptions, airports and (sports) schools, for example. It is also a solution for access with special needs, such as wheelchairs and/or prams.

The dTower is available in various widths. You are also flexible in the setup. You choose the number of passages you need for your specific situation.

Flowrates

Cardreader: 18-20 persons per minute

Biometrical: 10-15 persons per minute

The functionality has been tested in a laboratory. The lifespan of the dTower has been calculated at about 5.000.000 movements.

Here you can find some video's of the dTower:

dFlow

The dFlow is an advanced access lane, packed with new technologies like advanced AI. The doors are fast moving revolving doors. Advanced algorithms allow them to close at a rate proportional to the speed, position and direction of one or more unauthorized users in the transit area.

The doors will open again if the unauthorized users move away from the swing gates.

Indicative LED “windows” follow the user through the gate, with different colors for different user groups. For example, students in a school application can be followed by a green window, teachers by a yellow window, and authorized family members by a blue window. A red “window” can track unauthorized users. The flexibility of dFlow allows other user groups to be identified by a wide variety of colors. The result is more comfort for the user and more security and information for the access control system.

Flowrates

Cardreader: 50 persons per minute

Biometrical: 34 persons per minute

Here you can find some video's of the dFlow:

dGate

The dGate access lane has been designed and developed down to the smallest details to bring innovation, quality and design to the access control market.

This access lane offers comfort, refinement and reliability. An elegant product that makes customization easy.

The dGate is available in different passage widths. You are also flexible in the setup. You choose the number of passages you need for your specific situation. The swing gate doors are extremely user-friendly, with an opening angle of 90 degrees.

Barriers & Bollards

For barriers you can check the website of our sister company Geran Handel BV.

For more information you can visit this page:

https://www.geran.nl/slagbomen/?pa_hydraulisch-of-mechanisch=hydraulisch

We also offer different models of bollards, like the bollard Talos:

<https://www.geran.nl/125/assortiment/bollards/bollard-talos-275.html>

The benefits of Geran

Our hardware can be connect to a various kind of systems. The barriers, bollards, (tripod) turnstiles and access lanes can work with a “potential-free contact” that is serviced trough an access control system.

We also have our own technical service with planners and mechanics. The customer has an “one-stop-shop” for both of our companies.

Please see some examples of our projects which we sometimes perform with our customers:
